

ABSTRACT

A water-based silylated urethane composition is used as a water-based adhesive that has high safety, develops
5 satisfactory tackiness in a short time and has excellent initial bond strength. The water-based silylated urethane composition contains following Components (A), (B) and (C):

(A) a urethane prepolymer containing an anionic group and a tertiary amino group and having a terminal alkoxysilyl
10 group, the urethane prepolymer (A) being a reaction product of an anionic-group-free polyol compound (A1), an anionic-group-containing polyol compound (A2), a compound (A3) containing a tertiary amino group and an isocyanate-reactive group, a polyisocyanate compound (A4), an alkoxysilane
15 compound (A5) containing an isocyanate-reactive group, and an amine-based chain extender (A6);

(B) a basic compound; and

(C) water
